

Body Systems Research Guiding Questions

My assigned body system is: _____

List the components of the body system:

Describe how each component functions:

How do the different components work together to make the whole system function?

What other body systems does your assigned system interact with?

How do they interact?
Be specific ☺

The disease that targets our body system is: _____

Which components of your assigned body system are directly targeted by the disease?

How does that impact their individual function?

How does that impact the function of the system as a whole?

What other body systems will be impacted if your assigned system isn't functioning properly?

How will they be impacted?
