

Exhibit Disease Research Guiding Questions

Our historical disease is _____.

The virus or bacteria that causes this disease is _____.

During what time period and where in the world was this disease a pandemic?

Symptoms of the disease:

Which body systems are targeted by each of the major symptoms?

What specific components of each targeted body system are affected? How are they affected?

How are the normal functions of each body system affected by the disease symptoms?

This question may require you to use your background knowledge of body system functions and interactions.

Are any body systems indirectly affected by the disease due to their interactions with one of the body systems listed above? How are they affected?

How does the virus or bacteria get into the human body?

What does the virus or bacteria do once inside the body?

How does the body fight off the disease infection?

How did this disease impact society? Does it still affect people today?

Did any historical factors about the society affect the severity of the disease and its death toll?
